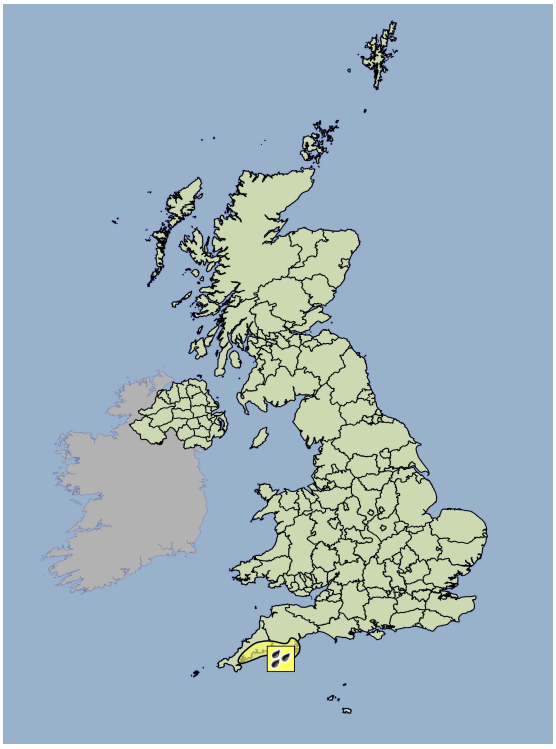
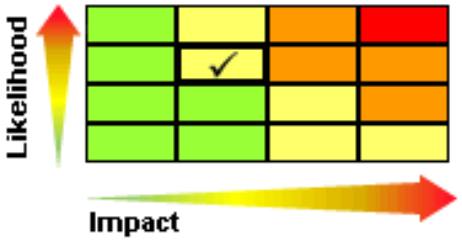
National Severe Weather Warning Service





Chief Forecasters Assessment
Conditions are unstable at present, and this will allow some heavy showers to develop across parts of Devon and Cornwall on Monday afternoon. Southern parts of the peninsula will be favoured as sea breezes meet the prevailing northerly wind, producing some slow-moving, thundery downpours here. These may produce 10 to 15 mm in an hour, and, perhaps very locally, 30 mm in three hours. This may be enough for some surface water flooding. However, many places will miss the worst of the showers.

The showers will slowly die out through Monday evening.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Mon, 28th Apr 2014** until **20:00 on Mon, 28th Apr 2014**

Heavy, thundery downpours are expected to develop during Monday afternoon.

The public should be aware of the potential for some minor disruption due to surface water flooding.
